Isuzu has begun recalling its 1998 through 2002 Rodeo models, as well as its 2002 Axioms because of months later, the frame had been rusted out and that when she purchased her Isuzu Rodeo in 2010, it crashes.

One consumer spoke to the news source and stated issue seriously, which could lead to an increase in Furthermore, many car owners are not taking the corrosion, rust affecting more than just Ford experienced in recent recall=

isuzu.com/investigation shows corrosion, rust affecting more than just Ford Windstars

Wednesday, March 30, 2011

A recent investigation conducted by a local Cleveland news station discovered that more vehicles than just the recently recalled Ford Windstars are suffering from advanced rust and corrosion.

According to the news source, more than 1 million cars have been recalled for rust-related problems. Furthermore, many car owners are not taking the issue seriously, which could lead to an increase in crashes.

One consumer spoke to the news source and stated that when she purchased her Isuzu Rodeo in 2010, it looked fine on the outside; however, less than seven months later, the frame had been rusted out and revealed a large hole.

Isuzu has begun recalling its 1998 through 2002 Rodeo models, as well as its 2002 Axioms because of these issues. Some models have been so ravaged by corrosion, Isuzu will not repair them.

Recently, a woman in South Berwick, Maine, narrowly avoided a serious car crash when the rear axle on her 2000 Ford Windstar broke due to corrosion issues. This event, among others, highlights the need for increased corrosion inspection on a yearly basis.
